Beyond All Reason Wiki/Archive (BARchive)

Concept/Idea for BARchive:

- BARchive is a wiki/archive of all the major content that is currently present on the opensource Real-Time Strategy Game, Beyond All Reason.
- The key functions of BARchive is that of a typical online encyclopedia/Wikipedia website for any particular piece of media, all hosted within GitHub (for now).

Target Users:

- The main demographic we try to appeal to are those who typically use Wikipedia, Fandom, Wiki.gg, or Miraheze for their information on pieces of media.

User Needs and Pain Points:

- At it's current state. BARchive supports six pages with some skeleton content that will be built-upon later down the line when more work is contributed into the site. The goal is to try to make a professional wiki that caters to players looking for quick and easy-to-read articles and quick information that doesn't permit the need to go through the official website for any information on gameplay.

Design Intent:

- The color palette we chose is very similar to the steel black, grey, and yellow scheme that the o icial website uses, in order to remain consistent with the theme of the game. We also wanted to minimize as much clutter on the site: no pop-ups, no side content that leads to other media not related to BAR, and trying to maintain an ad-free site. By achieving this, we can hope to reduce the clutter and make the articles we present smooth to the reader's content.

AI Acknowledgement:

- We have used the following models Gemini, ChatGPT, and Claude. Claude was used to write the code for JavaScript, ChatGPT and Gemini were used to help with formatting and debugging for HTML and CSS
